

The beautiful warm glow of a Black Tai Salt Crystal Lamp creates a soothing, relaxing atmosphere in any room. They can be used in bedrooms, living rooms, hallways, offices, meditation rooms, therapy rooms, waiting rooms and for Feng Shui energy. The lamps' healing and purifying properties make them ideal around televisions, computers and cigarette smoke. Black Tai Salt Lamps are crafted by hand to retain their unique natural shape. The lit bulb warms the salt and sends light that flows through the crystal releasing large quantities of healthy negative ions which improve the quality and freshness of the air. While most ionizers are man made machines, salt crystal lamps are a natural and beautiful alternative from Mother Nature. Salt crystals were formed hundreds of million of years ago at the foothills of the Himalayas, when the salt lakes dried up. The crystalline structure of the rock salt was formed via gradual evaporation and the enormous pressures inside the earth due to the forming mountains. Natural inclusions such as iron (red) or manganese (yellow) give the crystal such beautiful colors ranging from light apricot to a dark orange.
